

PLAYFUL and BEAUTIFUL

Rip needs to be an emotional connection to capturing images on the web and storing them, displaying them and sharing them.

Give people the Quickest & Easiest way to Use It!

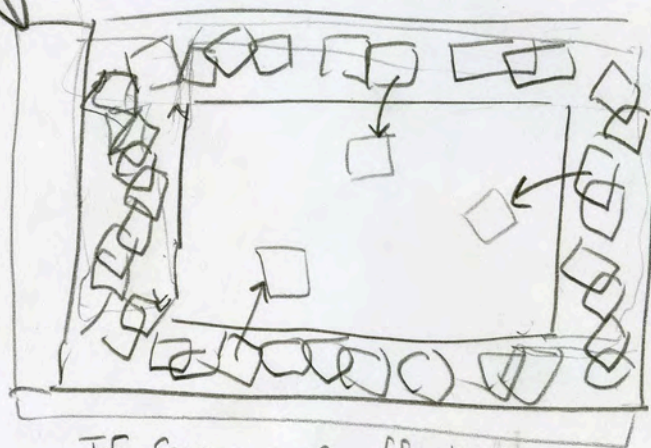

The Pile can show very subtle movement. There is air circulating in the room and there is minimal movement of the edge of the paper.

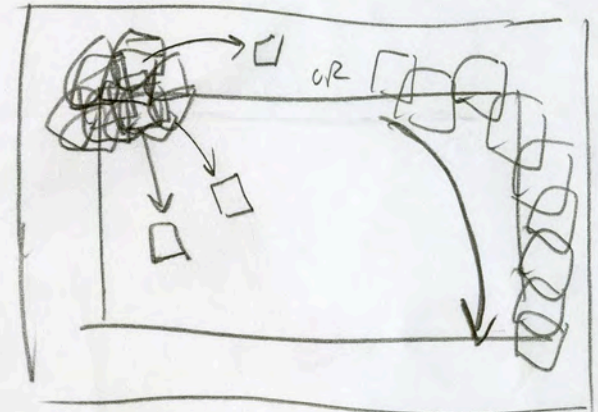

If scraps are on table, they may need to be moved off, then back on to start assembling on page.

If Scraps are off table, you can drag on to make arrangement. (assemble)

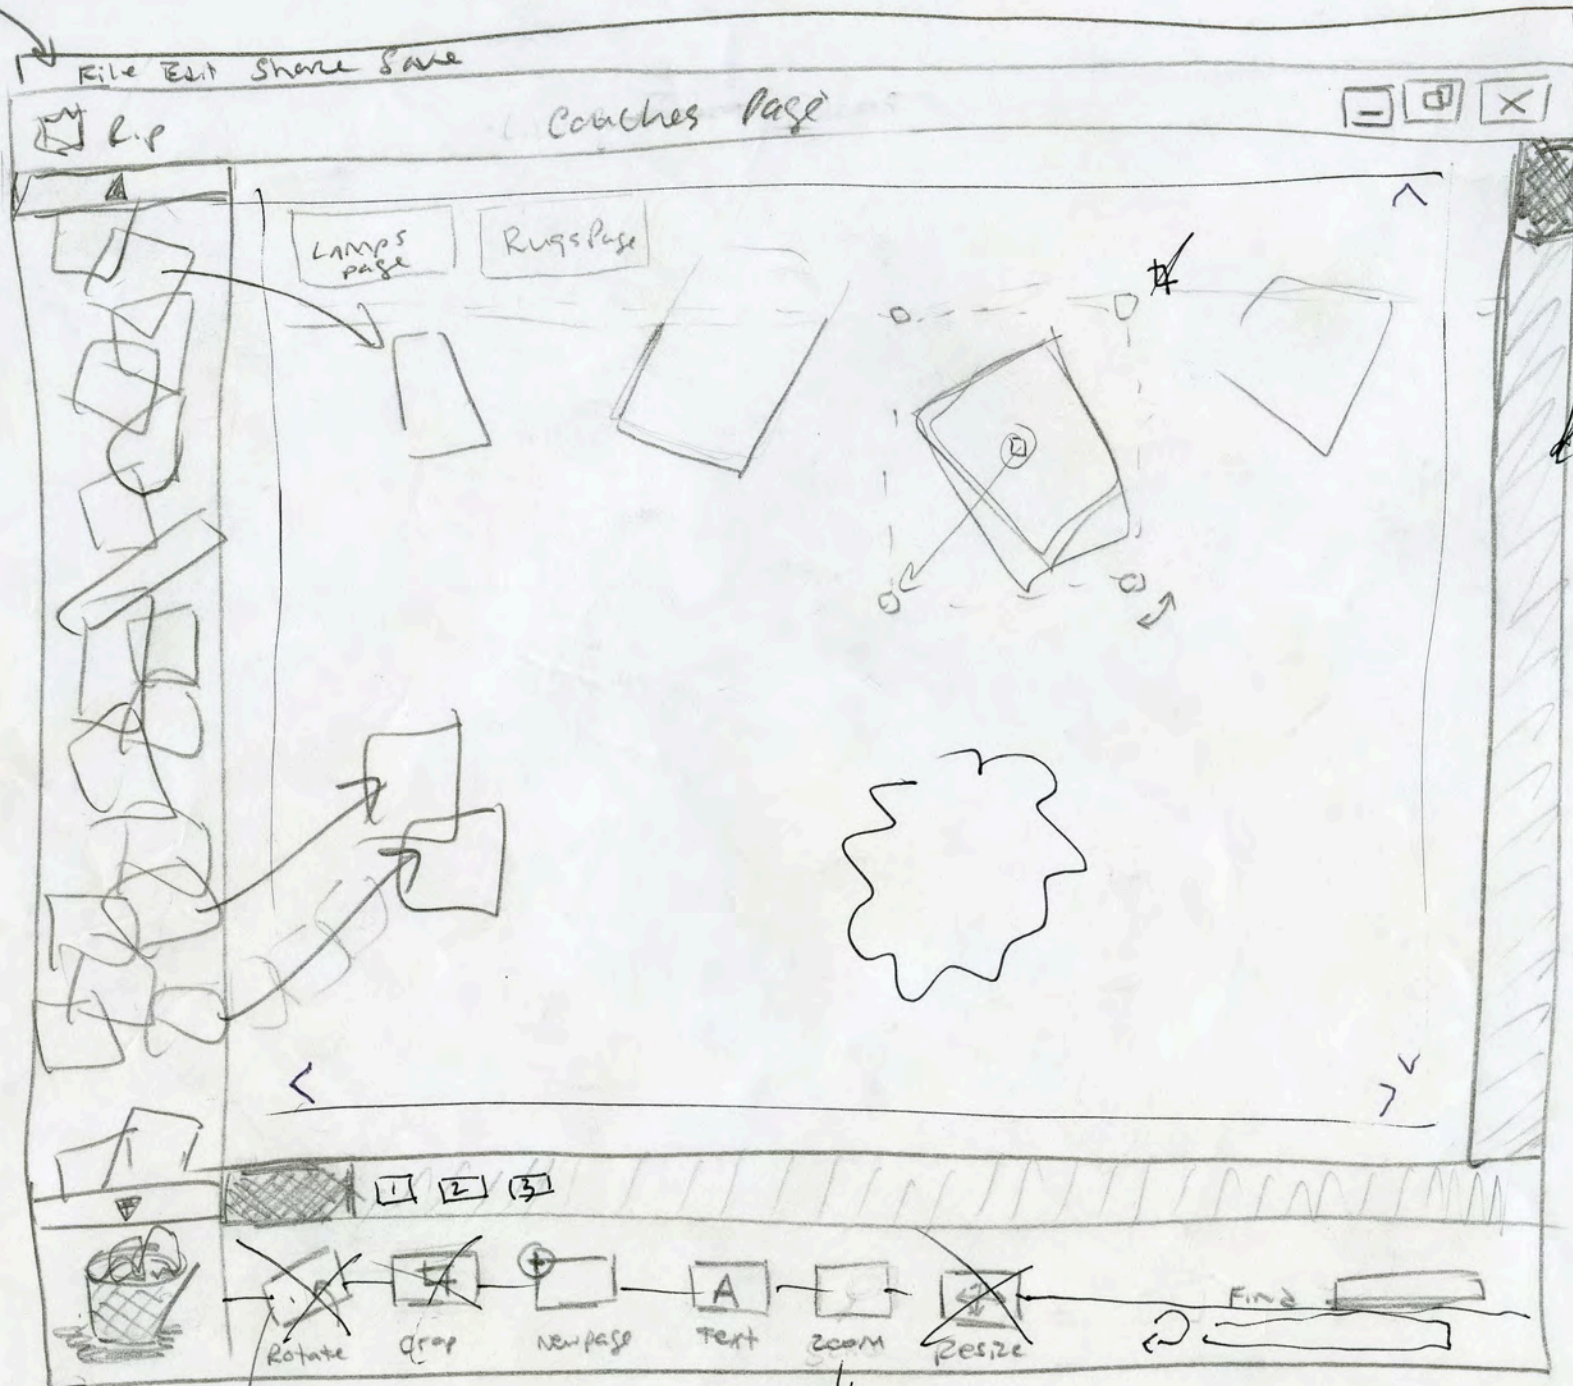

- Where would new images go from another rip session?

What if the pile displayed in a corner and you click and drag to spread them out? (like a deck of cards)

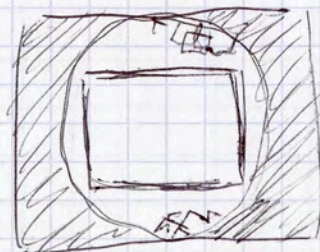

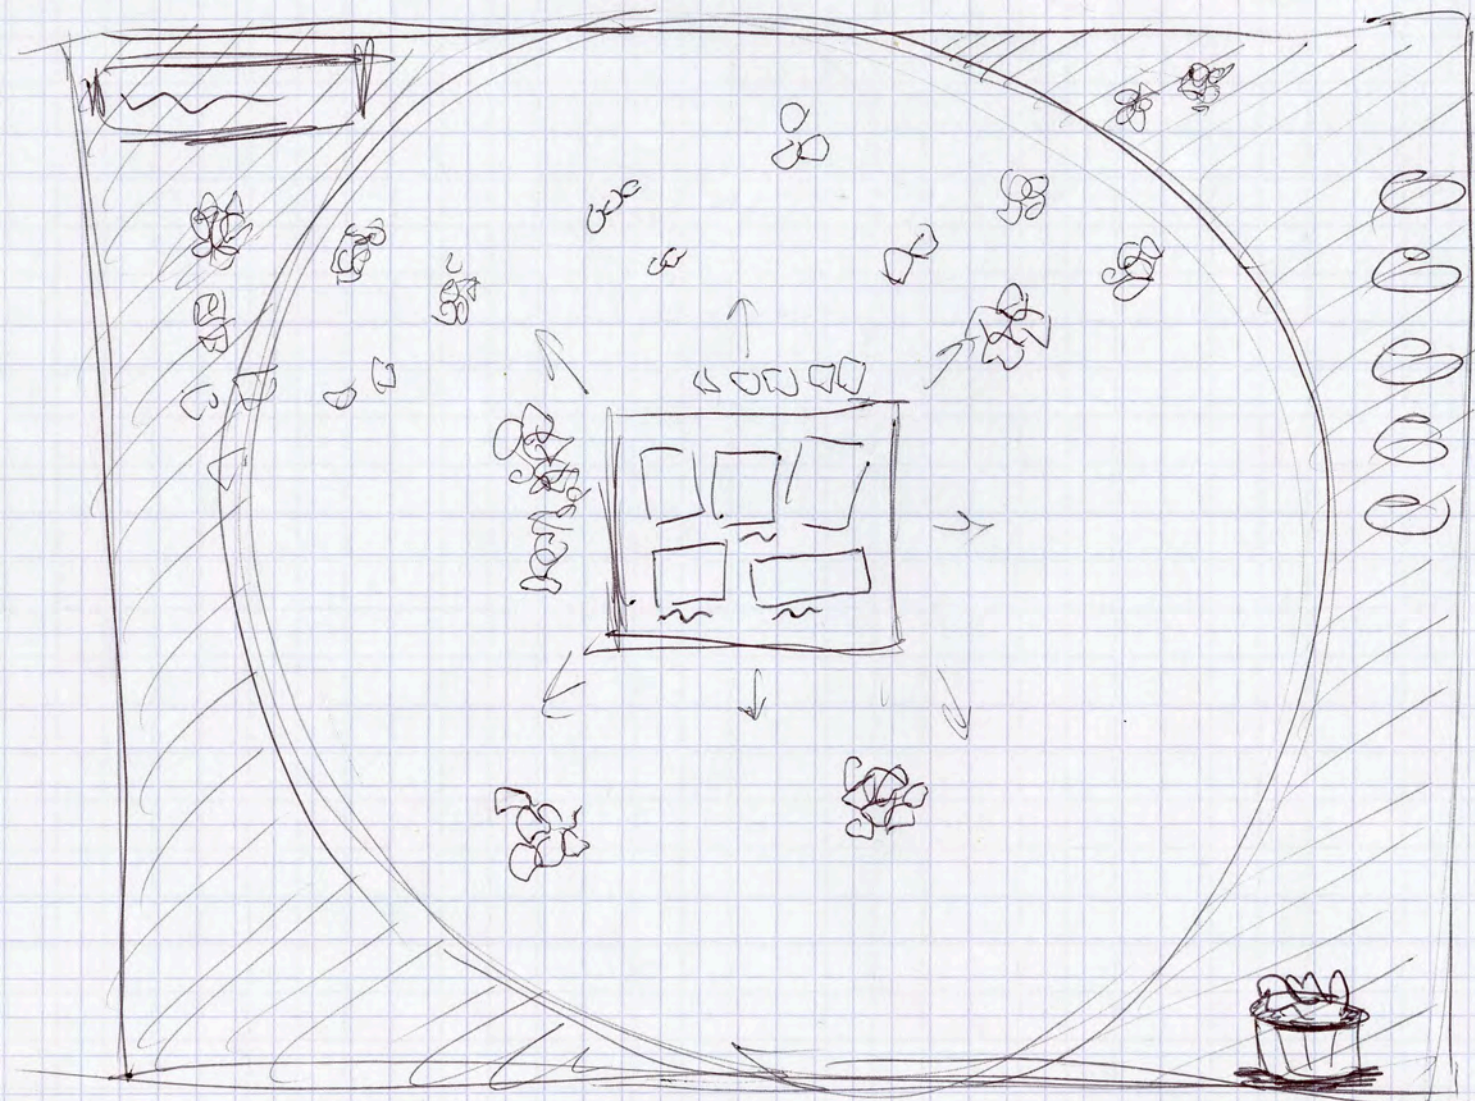

or you could just start dragging images and arranging them.

How would you select the whole pile to click + drag?
